

Children & senior citizen's grids or security net in the alcove?

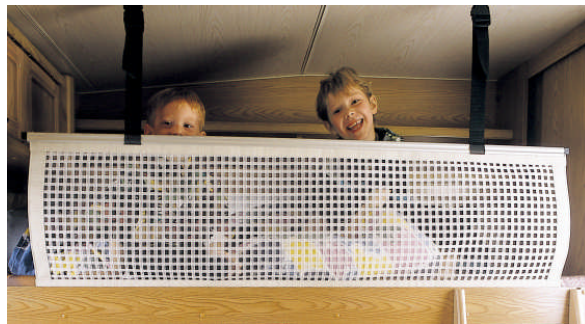

WARNING: The security net in the Alcove can behave as a hammock!

We have made the experience that one of our grandchildren lay at the age of 5 years in the protection net before the Alcove, how in a hammock. Fortunately, we were travel-mobile in and could intervene. This situation has itself with turn in the sleep devotedly, because the **bungee cord rope** of the net gives way in the Laika.

Then we have converted after this experience immediately to a Reer bed grid with lengthening to 2 meters for about 40 €.

Miscellaneous manufacturer have passed in years already reequipped on a Seitz stiff security net with two belt castles (safety standards authority checked).

Recommendation:

One should substitute for the bungee cord rope, in any case, with a belt connection or convert to a Reer bed grid with lengthening.

By the lengthening one needs no other connection. Because the grid pushes by the length of wall to wall, **behind the upper cupboards in the Laika EcoVip 4.1.**
